

**Michigan weather is unpredictable and often dangerous!**

## Across the nation

This map assesses each state's risk of being hit by one or more of the weather-related or natural disasters shown on these pages on a scale of 1 to 8. By this standard, Nevada is the least vulnerable:

Help protect yourself and your community by joining us for a free and open to the public Weather program presented by the staff of the Grand Rapids National Weather Service.

This program will educate you about Michigan's hazardous weather and how you can become a trained weather spotter. As a trained weather spotter you can help protect your family and community when bad weather is on the horizon. Trained weather spotters are the front line for the National Weather Service and their input is invaluable to weather service operations.
